SUMMARY

Senior Software Engineer with 5+ years building distributed backend systems, cloud data platforms, and identity infrastructure for large scale telecom platforms. Architected an Enterprise Data Framework on Databricks spanning 60+ tables and 12 Delta Live Tables pipelines, replaced 20 DMAAP modules with Kafka services on Confluent Cloud, and moved 15 applications onto Microsoft Entra ID with JWT and JWKS validation.

SKILLS

Languages and Backend: Java 17/11/8, Python, SQL, Spring Boot, Spring Boot Actuator, JPA/Hibernate, Maven, REST APIs, Microservices

Testing and Quality: JUnit, Mockito, SonarQube, Code coverage gates, CI/CD quality checks, Code review

Identity and Security: OAuth2/OIDC, Microsoft Entra ID, JWT, JWKS validation, ECCUser session based authentication, Managed Identity, Sentry

Data and Messaging: Databricks, Delta Live Tables, Delta Lake, Medallion Architecture, CDC, SCD Type 1/2, GoldenGate, Apache Kafka, Confluent Cloud, Dead letter queues, IBM MQ, IE Bus

Cloud and DevOps: Microsoft Azure, AKS, Azure App Service, Docker, GitHub Actions, CI/CD, Redis/Redisson, Agile and Scrum, SAFe

Frontend and AI: React.js, JavaScript ES6+, HTML5, CSS3, Component based architecture, Responsive design, RAG agents, LLM integration

Legacy Modernization: CORBA, Apache Struts, ActiveVOS, BPEL, Sybase, DSAP, WebLogic, Tomcat, Oracle

PROFESSIONAL EXPERIENCE

Senior Associate Software Engineer, AT&T

Sep 2025 to Present

- Architected the Enterprise Data Framework on Databricks, a config driven CDC ingestion platform processing 60+ tables across 8 schemas from GoldenGate, Kafka/IE Bus, CADM SFTP, and REST sources through 12 serverless Delta Live Tables pipelines in Python and SQL, applying Medallion Architecture with SCD Type 1 and 2 handling and automated data quality quarantine.
- Designed a Python and YAML driven BronzeTableFactory pattern that enabled zero code onboarding of new source tables, adopted as the enterprise standard ingestion template.
- Replaced 20 DMAAP NRT modules with Kafka based standalone services on Confluent Cloud, introducing dead letter queues for failed message handling and Spring Boot Actuator health checks that gave operations teams per service health status and automatic replay of failed messages from the dead letter queues.
- Scaled Inquire microservices from 1 to 3 Azure App Service instances through Docker and GitHub Actions CI/CD, implementing Redis and Redisson distributed caching with 24 hour TTL, Managed Identity authentication, and token refresh handling, with the Manage service deployed on AKS.
- Migrated 15 applications from global login and OIDC to Microsoft Entra ID with JWT bearer token validation against JWKS endpoints, and integrated Sentry for error monitoring.
- Modernized 10 legacy Struts applications to Spring Boot on WebLogic using JPA/Hibernate and Maven, covering the rewrite with JUnit and Mockito test suites and SonarQube quality gates in the CI/CD pipeline.
- Remediated 30 high priority bug bounty findings within a 30 day SLA, closing vulnerabilities across authentication, injection, and session handling.
- Built a RAG based AI agent on Large Language Models that evaluates codebases against HLD documentation, automates README updates with Mermaid diagrams, and answers natural language queries on Kafka topic ownership and workflow locations.

Cloud Full Stack Developer, IBM

Jun 2021 to Aug 2025

- Directed the migration of 30 DSM transaction types from CORBA to REST, building a bridge layer where CORBA stub calls invoked REST APIs routed to Sybase, MQ, or DSAP.
- Led impact analysis across 80 DMAAP topics for the DMAAP to Kafka migration, identifying affected services and modernizing NRT flow applications from DMAAP and Tomcat to Spring Boot with Kafka integration.
- Engineered 15+ SCOPE and ActiveVOS workflow services using MQ backed MDB listeners that triggered BPEL processes and loaded data to Oracle, deployed as BPR services on WebLogic.
- Hardened legacy Struts applications against SQL injection, CSRF, and cross site scripting, and strengthened ECCUser session based access controls.
- Delivered billing and order management services spanning order creation, generation, validation, and fulfillment, tuning database queries and connection pooling to sustain high throughput enterprise traffic, and mentoring junior engineers within an Agile and Scrum delivery model.

PROJECTS

Personal Engineering Portfolio, React.js

- Developed and deployed a production React.js application using functional components, hooks, and Context API for state management, with responsive CSS3 design and an npm build pipeline.

ACHIEVEMENTS

- Received two Connection Awards and one Transformer Award within the first year of tenure.

EDUCATION AND CERTIFICATIONS

B.Tech, Computer Science and Engineering, Vignan Institute of Information and Technology, 2020, 82% aggregate

Certifications: Microsoft Certified Azure Fundamentals AZ 900 | SAFe 5 Practitioner
